DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/27/2008 has been entered.

Reasons for Allowance

2. Claims 11-16, 18 and 20 are allowed over the prior art of record. Claims 11-16, 18 and 20 are renumbered as 1-8 respectively.

3. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a system that provides a printing service to users through having a temporary address generated and sent to a host computer from a printer, the terminal device stores image information at the address and the printer then determines if the server that hosts the temporary address stores image data at that address. Once the printer detects image data at the address, the image data is printed. Each independent claim identifies the uniquely distinct features of having "*a printer to generate a temporary address indicating a storage area of said server, said storage area being reserved to temporarily store image data which has not yet been received by the server*". When searching for prior art to disclose Applicant's invention, the Examiner

did not find art that read on the printer generating a temporary address on the server and sending this information to a terminal device or computer so that the computer can store information at this location in order for the printer to determine if image data is stored at this location before accessing the information for printing. The reference of Okamoto '954, which was applied in the previous rejection, had a device that could be considered as a printer that transmitted image data information to a computer, but this is after the image data is stored in that specific URL. This is the same case for the Iwata '289 reference also applied to the claims in the previous rejection. The printer transmits a location to a computer after image data is already stored in that location. Another reference, Shima '457 is an example of a printing device simply requesting information from a computer that stores a job. The printer does not send a storage location that does not have any image data to a computer in order for the computer to store image data at that location. The Bunn '193 reference is used to have printers request information from a terminal device, which does not read on the claim feature in question. The Saito '426 reference, which is used to have a facsimile send URLs with image data information, also does not read on the claim feature in question. Therefore, the Examiner concludes that the claims in the application are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
